## METLOCK

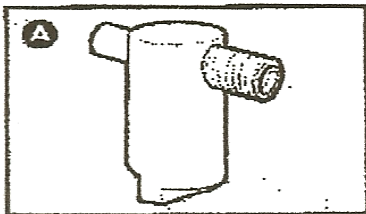

### METAL WINDOW METLOCK

#### CONTENTS

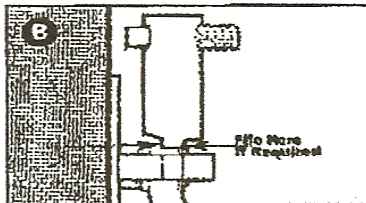

#### TOOLS REQUIRED

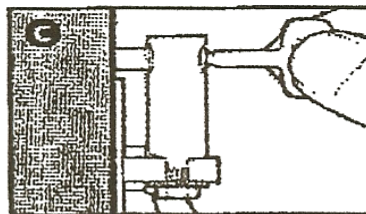

- \* 8mm spanner
- \* Hacksaw
- \* File

- A. Remove bolt and washer from lock body. Unscrew locking pin to allow lock body to be fitted to handle, but do not remove.

- B. Slide lock body between window handle forks and ensure that taper on lock body coincides with taper on window handle. File base of lock body if necessary to ensure tight fit. Re-insert bolt and washer in base of lock body and tighten with spanner.

- C. To lock handle, use key to tighten locking pin against window frame. If pin is too long use hacksaw to cut off required amount to ensure threaded section of locking pin is flush with lock body.
